Subject: Green Flash Meteor Revisited

Ref. my posts in Dec, Nov of 1996. Seems like these "meteors" are rather common in Southern CA. Makes me want to re-roof with corrugated metal.

The Daily Press

Victorville, CA
"Twenty Years Ago"

Officials at the Griffith Park Observatory in Los Angeles believed a large fireball that streaked across the sky may have fallen near Victorville. The object, possibly a meteorite, was blue-green in color and appeared to be trailing flames. The object was seen by many Los Angeles residents.

ME: These green meteorites seem to be rather common around the Mojave Desert area. I'm wondering if people in other parts of the country have knowledge of such happenings? Oh, yeah, now there's a big flap about sonic booms occurring on a regular basis in Nevada and CA. AF blames it on retired SR-71's.
