

AREA 51: Green Flash / meteor?

Subject: AREA 51: Green Flash / meteor?

After reading your archived newsletters I would like to add a note to the 'green flash / meteor' event. The night of the TWA crash I was listening to CBS radio, 880 AM, and many of the people interviewed about seeing the plane blow up reported a 'green' trail approaching the plane before it exploded.

There were at least 100 eye witnesses and many referred to the green trail. Also, I seem to remember hearing about a meteor being visible during daylight over Arizona, New Mexico and California about a week after the crash.

But this was a very busy meteor year, if I'm not mistaken.. it was in Maine anyway. More meteors visible than normal, during the summer.

Another note - There was mention of an atomic accident (power plant? msg. #12, Oct, 18, '96) that might refer to an accident at Ft. Dix in NJ. It happened a long time ago and there is a large area that has been covered in concrete. Sorry, I don't know the details. I grew up about 30 miles from there and it was mentioned but I wasn't privy to details.

I really like your newsletter.

Jane
