I have been asked to elaborate on the supposed Area 51 computer IP addresses listed in HACKER.TXT

Here is a list of the IP 141 addresses which were supposedly those for Area 51. They are not classified. You will note that they are mostly all in Germany. Interrogating each address will give more specific information for each address.

Interestingly, some of the other Military addresses are indeed correct, which indicates that someone was pulling someone's chain.

Unless these IP addresses were indeed correct at the time, and have since been de-classified, which will be reflected in when they were registered. Somehow I don't think they were ever classified. Although some of the higher numbers such as 188 and 192 listed at the end of the text are not supposed to be assigned IP numbers, so could indeed be classified.

This is a time-consuming process, so it is time to pass the baton on this one.

Tony Craddock
