## Physicists Announce Low-Cost Fusion Reactor [news]

From: "Michael J. Poirier" <[mpoirier@mbay.net](mailto:mpoirier@mbay.net)>  
Date: Sat, 29 Nov 1997 19:29:38 -0800

(out from deep-cover lurking...)

I saw this article several days ago in the San Francisco Chronicle. I think this just another step in revealing alien technology to the human race. And it also explains the aliens' need for boron, that substance so plentiful in southeastern California. Only three ounces a day will produce 50 megawatts continuously.... that is probably why the alien's impact on our supply has not even been noticed. And since the Office of Naval Research (reported to be the PRIMARY agency involved with Area 51 now) is involved, it must be true!

They will ACT like they're testing some new device so that they can do a full-scale roll out of this 'breakthrough' technology in about 3-8 years.

Physicists Announce Creation of Low-Cost Fusion Reactor  
Energy alternative to fossil fuels

Charles Petit, Chronicle Science Writer

Physicists in California and Florida say they have designed a compact, boron-fueled fusion reactor that would make low-cost electricity with no radiation hazards and may be much easier to build than the monster machines now favored by major federal programs.

If it, or other new ideas for fusion reactors, do work, they would have immense impact on the world's economy, and on worries over greenhouse warming of the climate from the burning of fossil fuels.

Units of the new design would be small enough to be built anywhere. A drawing of a proposed prototype shows a machine about four times the size of a city bus. It would generate 50 megawatts of power -- enough for a town of about 50,000 people.
