Our Review

Opinion of the webmaster, subject to debate

This book represents a cautious approach to Near Death Experiences (NDE). Many say they have followed a "tunnel of light" and met angels. Some claim to have drifted out of their bodies and seen their own death from afar. Others says have seen their whole life presented in review. ¶The author contends that most of these reports can be accounted for by purely physiological causes, the result of the brain shutting down, along with preconceptions and unconscious confabulation by the experiencer. This is not debunkery, however. Blackmore carefully reviews the problems involved in evaluating these reports and fairly reviews each of the competing theories. Blackmore does not seem predisposed to believe or disbelieve; her theories are simply at the more conservative end of the spectrum. As with other good skeptics books, this one is packed with references and footnotes, so even if you disagree with the author's interpretations, the book is still useful as a reference source. -- *Glenn Campbell*

Information from the Publisher

Always supportive

From the Book Cover

"Suddenly, amidst all this pain I saw a light, very faint and in the distance. It got nearer to me, and everything was so quiet, it was warm, I was warm, and all the pain began to go."

"It is over a hundred and thirty years since science seriously tackled the nature of human origins. Is it ready to tackle the nature of human death? I think so. The past twenty years have seen great strides forward. The discovery and study of near-death experiences has taught us about the experience of nearly dying. Progress in medical science has increased our understanding of what happens when the brain begins to fail. Psychology is delving ever more deeply into the nature of that precious self. This book is an attempt to explore what psychology, biology, and medicine have to say about death and dying. Are you ready to find out what it's going to be like when you die?"

Opinion has long been divided over Near-Death Experiences, or NDEs, some presenting them as evidence for the existence of the soul and life after death, others arguing that they are merely the chemical and physiological products of a dying brain.

Susan Blackmore has interviewed many people who claim to have had NDEs, and after researching hundreds of case histories she offers an absorbing and detailed review of this fascinating and controversial phenomenon. While presenting clear physical explanations for the changes that take place within the brain, Blackmore argues that true spiritual transformation comes not from searching after a spirit or soul that survives death, but from reinterpreting the concept of "self" itself.

Dying to Live succeeds in bridging the gap between the scientific and the spiritual points of view and shows how an understanding of NDEs can help us live our lives in the face of death and lead the way to genuine self- knowledge.

SUSAN BLACKMORE is Senior Lecturer in Psychology at the University of the West of England. She is a fellow of the Committee for the Scientific Investigation of Claims of the Paranormal and one of the world's leading experts on near-death experiences. She is the author of The Adventures of a Parapsychologist (Prometheus Books), an autobiography describing her search for evidence of the paranormal.

Table of Contents

Acknowledgements

Preface

1. Coming Close to Death
2. The Stages of Dying
3. Visions From the Dying Brain
4. The Light at the End of the Tunnel
5. Peace, Joy and Bliss
6. But I Saw the Colour of Her Dress
7. Realer Than Real
8. In or Out of the Body?
9. My Whole Life Flashed Before Me
- IO. All At Once and Timeless
11. I Decided to Come Back
12. Who Returns?
13. And After Death?
