Book Catalog An excerpt from Fishing Groom Lake:

Introduction

Fishing Groom Lake was prepared for both the experienced and the serious amateur investigators of the UFO phenomena and Area 51. It is not a general history of, nor a guide to, Area 51 and vicinity.

Fishing Groom Lake is a "Black Bag" tool box for the investigator. Using the information and equipment contained in this manual brings the technological art of phenomena observation up to a level never before available to the general public. If used as intended, this manual will increase both the quality and enjoyment of your UFO and Area 51 phenomena investigation.

Fishing Groom Lake is presented in a format that allows a quick reference to specific areas of interest; but also, in a natural progression of important topics and information that should be read from start to finish by both the experienced and the serious amateur investigators.

PREPARATION AND RESEARCH: **Fishing Groom Lake** is THE single source for in depth information regarding detecting and tracking UFO and Area 51 phenomena. The authors have spent months researching and gathering the most recent data available. Untold hours were spent searching archives and web sites on the InterNet to download the best information available. At least an equal number of hours were spent culling-out the ridiculous and worthless web sites. For those without access to the InterNet, the information we have gleaned will be educational as well as astounding. For those with access to the InterNet, we have included a complete URL listing of both sites covered in the text and a few additional sites that can be accessed for further information.

SCANNING DREAMLAND: Known frequencies of Nellis AFB complex and Area 51.

ELECTRONIC DETECTING AND TRACKING: This section has been compiled with two important criteria always in mind.

FIRST: Every circuit and device must have been used personally by the authors or must have been a working early-generation of a more expensive and complicated final generation device. Under each category, there is often more than one circuit and description for a same-purpose device. They will be clearly noted as good, better and best. These designations always denote newer generational improvements and usually will indicate the relative increase in the cost of each.

SECOND: Every circuit and device must have a logical purpose in either search, detection or data accumulation and recording. We have concentrated on the eight main areas of physical science that have proven to be useful in search and detection: Sound, Light, Heat, Gravitational Field, rf Energy, Radiation, Ultrasonic and Seismic.

Investigating the UFO phenomena and Area 51 can be an exciting and exhilarating experience for both the experienced and the serious amateur alike. Using the information and equipment contained in this manual can Provide many hours of fascination and enjoyment. PLEASE ... abide by all Federal, State and Local laws and always respect the personal and property rights of others.
