 - "[Physics from UFO Data](#)" (published technical article) - Research project regarding the use of radar-assisted astronomy-like sensors for the acquisition of photometric and spectroscopic UFO data. Expected measured physical parameters are amply discussed. - By Dr. Massimo Teodorani - Published: 6/12/99 - Source: Ufodatanet Report / c.i.s.u. udn <#3.1>

"A research project on the UFO phenomenon is proposed in which UFO targets are treated on a par with astronomical objects having no fixed coordinates. Specifically oriented monitoring techniques and strategies involving small telescopes which are connected"
 - "[The Hessdalen Luminous Phenomenon: a Data Analysis](#)" - Analysis of the multi-mode instrumental data (dating 1984) regarding the "Hessdalen Phenomenon". Important correlation analysis is also presented. - By Dr. Massimo Teodorani & Prof. Erling P. Strand - Published: 8/31/98 - Source: Ufodatanet Report / c.i.s.u. udn <#3.2>

" In the period 21 January - 26 February 1984, a group of researchers from "Project Hessdalen", was investigating a luminous phenomenon that was occurring with strong recurrence in the area of Hessdalen in Norway. Various instruments were used in order to monitor the phenomenon. In the present work, an attempt has been done to try to explain such a phenomenon, based on the data achieved during the investigation periode. The following main results are presented: (1) the luminous phenomenon occurs with a periodicity of about one day and is approximately coincident with some peculiar magnetic pulsations and, more scarcely, with some components of radio emission, (2) magnetometric data, radar data and some components of radiometric data show some slight correlation with daily solar activity. Hypothesis regarding formation of solar-driven plasmoids which acquire self-governing EM and magnetic fields, is further ventured and discussed. Technical requirements for future instrumental research are presented as well."
