Scientists say they made a frog float in air

From: "A.J. Craddock" <webmaster@cseti.org>
Date: Mon, 4 Aug 1997 19:31:11 -0800

Found this reported in some smallish regional newspapers, but none of the majors. Obviously only the tip of a huge anti-gravity research iceberg.

SCIENTISTS SAY THEY MADE A FROG FLOAT IN AIR

FROM NEWS SERVICE REPORTS

04/13/97
The Record, Northern New Jersey

All Editions Sunday
(Copyright 1997)

British and Dutch scientists say they have succeeded in floating a frog in air - using a magnetic field a million times stronger than that of the Earth.

And, they say, there is no reason why larger creatures, even humans, could not perform the same gravity-defying feat.

"It's perfectly feasible if you have a large enough magnetic field," said Peter Main, professor of physics at Nottingham University, one of the British scientists who collaborated with colleagues at the University of Nijmegen to create the first levitating amphibian.

Their endeavors are reported briefly in the current issue of the British magazine New Scientist.

To hold up the frog, the magnetic field had to be a million times stronger than that of the Earth, the scientists said. Only then was it strong enough to distort the orbits of electrons in the frog's atoms.

"If the magnetic field pushes the frog away with sufficient force, you will overcome gravity and the frog will float," Main said.

The trick also works on plants, grasshoppers, and fish in the same way, scientists say.

"Every ordinary object, whether it be a frog, a grasshopper, or a sandwich, is magnetic, but it's very rare to see such a spectacular demonstration of this," said Main.

The scientists said their frog showed no signs of distress after floating in the air inside a magnetic cylinder.
