ACC's Response to letter posted to UFOmind mailing list that I forwarded on to ACC for possible comment. Ed Komarek (ORTK)

Subject: RE: Thought you guys would be interested in this

To explain your findings, to whomsoever thought to put the MISINFORMATION about ACC in the below letter and in the database so indicated (and you have our permission to publicize this reply):

a) The business arrangements between American Computer Company and the thousands of customers to whom it provides native virtually hosted world wide websites, and to whom it provides software, hardware or developmental activities are, frankly, no one else's business. Were we to provide you with services, would you want us explaining your private business to outsiders? ACC are a privately held company and not subject to any form of public disclosure about those arrangements, either. Attempting to draw any conclusion about what's going on from the limited records of the INTERNIC's "whois" database, would be a mistake. All it represents is what was filled in on an INTERNIC Form when a particular website was first created. That is usually done to the convenience of the Website administrator, traditionally.

b) For the record: 6 Commerce Drive is NOT the main facility of American Computer Company or its subsidiaries. Again, our arrangement with Cali Realty Corporation is none of your or anyone's business. Would you expect a Landlord to publicize any arrangements between him

and his tenants, without first obtaining their permission? Our accomodation arrangements are no one else's business. Our business locations are our business, too. I find it surprising that people investigate us, to find out about us, when, in fact, we are investigating the Roswell Allegations that appear on our website. That's interesting, too. I am interested in finding out who said persons are.

c) For the record: "Kasparov.com" IS (during 1995/1996) Garry Kasparov's ORIGINAL world wide website. ACC does not write for that website, it is operated by a customer, and any claims made within it, are the webmaster's there. Whoever suggested it was a "name grab" is incorrect, and should immediately correct their records, it AGAIN: IS Garry Kasparov's ORIGINAL world wide website, Mr. Kasparov, after causing it to be organized, detached from it 9 months later, to enter into a conflicting contract of some kind, reportedly with IBM Corporation, who "GRABBED" the name "club-kasparov.com" - which we have heard was NOT SUCCESSFUL and has been discontinued. Intel Corporation maintained a "World Championship" website during the Kasparov v. Anand Championship in 1995, but that was not truly a "kasparov" website. "Kasporov.com" is legitimate, and the client who operates it, is too. Again, our relationships with our customers are really none of your business, however this client agreed to allow us to release the foregoing information.

He met with Garry Kasparov at the time of the very first Penn "Deep Blue" Match two years ago approximately, and worked with Kasparov's assistant, Michael Khodarkovsky, during that period. Time marches on.

The reason it was not dissolved stems from the "Garry Kasparov: International Chess School's" failure to pay invoices rendered it from when it ORDERED the website, so the site was leased off to a new user (and is available for re-lease now) to pay off its startup costs. We are not aware if Garry Kasparov knew that his school failed to pay for the site as he is a "chess player" first. The name "kasparov" on the domain, is held in the possession of an attorney and is NOT the property of Garry Kasparov, as he has declined to buyout the name and instead opted to replace his agreement with our client, with one made with our direct competitor: IBM Corporation, who over a year after "kasparov.com" came into existence, created the highly UNSUCCESSFUL (reportedly) "club-kasparov" domain.

In our opinion, Garry made all the wrong choices and would have been better with an Independent site and not playing Deep Blue in the second match which he lost. 20-20 hindsight, but interestingly, Jack Shulman predicted for two months before the 2nd Deep Blue match, that Kasparov WOULD lose it - bear in mind that Jack Shulman knows Kasparov, and designed some of the components and software which IBM used for the PP6000/SP2 known as Deep Blue, so he had reason to be able to judge correctly. Jack had also accurately predicted correctly Kasparov's win in the original match a year earlier at the ACM 50th Anniversary. Shulman was almost thrown into jail for 'mistatements by an official of a publicly traded company' by a very narrow minded attorney working for the New York Attorney General, when, in 1984, Jack stated publicly that machines like Deep Blue - could in some very deep "artificial intelligence" applications - out-think a man - or think 'like' a man. In the last Deep Blue match, IBM reached a performance level that was about the same as the machine-design Jack made those statements about in 1984, for the first time. Jack had predicted machines the speed of Deep Blue 1997 - and those much much faster, would be able to be used for applications where there intelligence might equal or exceed a man's, so long as their software was correctly written. We at ACC feel that Kasparov's loss and Jack's prediction, were proof: Shulman's was right ALL ALONG.

Under US law, a personal name is not deemed open to "trademark protection". The domain name and site have been "for sale" on the market for about two months at a specific price but it has not been widely advertised. It is extremely popular and bears an archive of the original prototype drawings used to create the original site for Kasparov. The supercomputer components which Jack Shulman designed, in 1983, used by IBM in the present Deep Blue (which has been retired) were the subject of a landmark 8 year long Federal Racketeering lawsuit he and others FILED AGAINST certain companies working for IBM who stole design documents by means of a break-in at Jack's home and office in 1985. That lawsuit put ALL the companies working for IBM on it, into Bankruptcy (mainly to flee the lawsuit, which was quite substantial), and has delayed IBM's ability to use the stolen merchandise in its mainstream Computer product line. The architecture of the central core of Deep Blue (a 256-Maisey array supporting 32 PowerPC Processors) is about 10 years or so behind some of the parallel processor technologies used today by American, in scope, but

well ahead of the rest of the Supercomputer Industry. Cross licensing has resulted in INTEL using some of that design in its Department of Energy system at Sandia National Laboratories, in New Mexico. However, their system is limited to 7350 Pentium Pros, and ours is a much larger scalable design, supporting, in theory, as many as 1,000,000 Pentium type CPUs, plus a lot of other enhancements which make it faster and more potent for applications like AI - known as "Artificial Reasoning Accelerators" - components which perform some of the work faster than conventional RISC CPU Chips. We have built and sold TWO Valkyries, and are working on a third at this time. Our chess challenge to IBM to play Deep Blue against a Valkyrie, went unresponded to, until Deep Blue retired from Chess. Given a 32CPU Deep Blue, versus a 16,000 CPU Valkyrie, and the same kinds of Chess software, which one do you think would win in a given unit of time, most likely?

d) For the Record: We do not formally publically advertise, aside from our website. Our thousands of customers come from other customers who have used our products and KNOW the difference. Do you find that "method" objectionable? We also keep the PC section and the Roswell section separate from each other on our Website, logically, because we are disinterested in selling PC's by means of the Roswell Investigation. As a matter of fact, we want to SOLVE the ROSWELL MYSTERY ACCURATELY for all time, then make a TON OF MONEY on the lecture circuit (kidding: to our knowledge, there really is no "paid" lecture circuit for this story).

Would the person who said our "Advertising methods" are questionable, please stand up so we can ask him to stop slandering us?

It's amazing how many wrong conclusions people are drawing. You'd think they work for AT&T or IBM and are drawing them deliberately. Maybe not.

Very truly yours,

--UFO NEWSWATCH
American Computer Company

Subject: American Computer Company and its many domains
From: Lloyd Jacobs <lkj@front.net>

[Regarding recent Roswell-related claims by "American Computer Company" and its president Jack Shulman.]

I'd bet that ACC is not much more than a boiler room operation. For one thing they share a leased suite (not to mention the same phone # and email) with other companies and organizations, all operated by Shulman and friends.

I looked up these domain names on a whois server.

compamerica.com,
accpc.com (American Computer Company)
Address: 6 Commerce Drive, suite 2000, Cranford, New Jersey

Note: ACC (ie. ACC Corporation) is also the name of a much larger telecommunications corporation.

acs2000.com (American Computer Scientists Association)
Address: 6 Commerce Drive, suite 2000, Cranford, New Jersey

Note: ACSA is also the acronym for the
Association of California School Administrators

ticorporation.com (Technology International Corporation)
Address: 6 Commerce Drive, second floor, Cranford, New Jersey

Note: Similar acronym to Texas Instruments (TI)

kasparov.com (American Computer Company)
Address: same as above

Note: a blatant domain name grab of Garry Kasparov, they even admit to a dispute with Kasparov and Robert Rice of the Professional Chess Association with a veiled disclaimer on the top page (www.kasparov.com). Most of the claims
