Subject: STS 80 Video - Content Information

To Jack Kasher and the Insiders List:

STS 80 VIDEO NOW HERE AND PRINTS.

We have managed to get a svhs copy of the Space Shuttle sts80 (Dec 1,1996) video that shows what appear to be LARGE ufos and many shooting-star type ufos. Photo prints of the best features are on display at the UFO Museum.

Summary: the shuttle is upside down, in orbit, at night, and dawn approaches. Clouds are below, and thunder-flashes can be seen. A large round bright object comes into the screen from upper left, and gets very large and round and bright in the middle of the screen, then meanders off to the right, and slowly moves to the horizon. As it does so, a very bright and long shooting star type thing shoots towards space. We have freeze-framed this and re-recorded it for effect. Also photographed the series of frames. This thing moves away from the Earth, and seems to be far above the atmosphere, so it is not a meteorite. Six or so OTHER similar objects flash by, in different directions, and other round and sometimes pulsing objects move about at different distances (miles or hundreds of miles) from the shuttle. Some seem to rotate. Then, a second Big round lit object appears from nowhere in the mid area, and moves to the left, as the first one is moving to the right. Ultimately, the right one reaches the horizon and may, or may not, go through the atmosphere, (in the curved band of visible air) but it links up with two or three large, distant, pulsing objects that seem to be not stars nor planets.

About then, some astronaut or the mission controller, zooms in on the linking up, which means they were aware of the objects.

And did not tell the public.....

Jack Kasher can call us at 415-989-5005 and we may be able to get him a copy for analysis.

In our view, this video is just as important as the STS 48 video that we argued at LENGTH WITH Jim Oberg about (the skeptic and NASA engineer) and had, in pre-net days, defeated him on his feeble arguments.(Ice,etc).

The previous video got on Larry King, and Hard Copy. We are willing to discuss this video with various media. We are trying to get various other experts to feed us some shuttle data, height, location,etc, so we can better measure the objects' sizes, which are maybe 40 X the size of the STS 48 objects.

And don't forget, some ufos can vary in size--- and shape.

Also, we post other people's opinions and research here, so send in yours. The croppies do, so why not you?

Ye editor
