>any event. I'd say a minute max, maybe 30 or 45 seconds.

Hello,

I suppose this may be a bit simplistic, but the above sounds exactly like a plane, from the written description. I suggest this embarrassingly obvious solution because I live in the San Francisco Bay Area between the Oakland Int'l Airport and the S.F. Int'l Airport. My home is on in tall hilly area overlooking virtually all of the immediate Bay Area. At any given time of the day or night, there could be over a dozen planes flying about. Apparently, my living room is in direct line of sight with a corridor used for jet take off. Every few minutes there appears to be an extremely bright white light hovering in the sky for what seems to be an uncomfortably long time, i.e., 30-45 seconds. The light then generally makes a right turn and flies off out of sight. Naturally, the jet appears to be hovering as it's in direct line of sight, then makes a 'right angle' turn. The pilot will turn off the lights as the jet ascends on to it's flight path creating the illusion that the light/object has disappeared. I don't mean to insult John and company's observation skills, but the written description seems like what I see out of my living room window every 3-5 minutes. Is it possible to enhance the video image? I'm just not sure how I (or we) can respond in a constructive way to a description of a blurry point of light.

Thanks,
Michael Davis
