>>false or misleading info to be presented to the ufo community.  
>The orb was very much the color in the pic and I guess it is  
>possible for lens flare and the orb to be close in colors. >

There are general geometric relations between a light source and a flare it might cause in an optical system. If you have other pictures with th orb in different locations they might prove that the orb is not a flare. For example, if you have another photo in which the sun (?) or light source is to the left and the orb is also left of center (the photo you showed has it right of center), this might be evidence against a flare. If you have several photos with the orb in different locations you might post same to help in the "flare analysis"..... which is being treated as "independent" of your testimony.
