Hello Brian!

Thanks for your comments.

The camera did not NEED to track the objects in question.  
Pixel count on the video showed no "linear" movement as such.  
I just locked the camera in position, on the tripod, and let  
it "roll."

The wind was quite strong, and some vibration took place, but  
there was NO need to do any tracking.

The sequence ran for about 15 minutes if I remember correctly.  
This also happened on the following evening, May 22nd. at the  
same time.

The video has NOT been altered in any way, and neither has the  
still that I posted on UpDates.

Best wishes.

JJ
