>>EBE-2 explained the weather of it's planet which was dry,  
>>varying temperature between 65-90 degrees. There was 35  
>>hours of constant sunshine and three hours of darkness

>I know I'm going to regret this... But how can a planet have  
>such vastly unequal periods of day and night? 35 hours to 3?!?  
>Shouldn't they be relatively equal?

>Even in a binary system it couldn't be consistant enough to be  
>35 and 3 every day could it?

>- Confused in Canada

Dear Confused in Canada:

I'm suffering from jet-lag and brown beer, and I can only think  
of one solution.

'EBE-2" is describing a planet with two suns, i.e. somehow  
involved in an unlikely dance with a double-star system.

The only alternative would be a planet with a wildly variable period of rotation!

I cannot imagine a living thing on such a world.

In short, [to borrow a phrase from Bruce Maccabee]

" Sounds like a crock to me. "

Very best wishes

- Larry Hatch

PS: Someday I will learn how to spell Macabee.
