Physics from UFO Data

Article by Massimo Teodorani, Ph.D. - Astronomer

Abstract

A research project on the UFO phenomenon is proposed in which UFO targets are treated on a par with astronomical objects having no fixed coordinates. Specifically oriented monitoring techniques and strategies involving small telescopes which are connected to CCD detectors, spectrographs and photon-counting photometers are presented. Expected exposure-times for acquiring a good S/N ratio of the target using all the proposed instruments is also evaluated. Finally, physical informations which are expected to come out from data analysis are presented and discussed in detail.
